

Growing Our Future.

Academic Undergraduate Scholarship Fund

The Academic Undergraduate Scholarship will be a scholarship program directed at baccalaureate-level college and university students created to support and develop outstanding future agronomy, crop, and soil scientists who will eventually become the next generation of leaders in their fields.

The need for professionals in the near future working globally in the fields of agronomy, crop, and soil science is well recognized. With the high cost of college tuition, multiyear scholarships focusing on these areas are important in building that talent pool. The number of undergraduate scholarships currently available through the ASF is very limited. Other scholarship sources are available in this area of need, but they are often defined for a specific university or focus. This scholarship provides an opportunity for the most promising undergraduate students attending a university or college within the United States who are in financial need to support their academic pursuits. Scholarships are to be awarded annually to students selected. Students showing appropriate academic progress could be granted a second year of funding.

Financial need would be weighted significantly along with scholarship, service activities, and applicant commitment. Applicants are treated equally regardless of race, color, national origin, sex, or religion.

We have a goal of raising \$50,000 to establish this fund. When determining which worthy cause to support in the coming year, please consider contributing to the Academic Undergraduate Scholarship and our efforts to help us sustain and grow the profession!
