# 2024 Western Society of Crop Science Meeting Recap

By Sandya Kesoju, USDA–NRCS; Arun Jani, California State University, Monterey Bay; and Juan Solomon, University of Nevada, Reno

| March 9, 2025

*Attendees of this year's Western Society of Crop Science (WSCS) meeting gather for a photo during a farm tour in Chualar, CA in July.*

---

The Western Society of Crop Science (WSCS) is a CSSA branch that comprises western states, territories, and provinces in Canada, Mexico, and the U.S. The WSCS 2024 meeting was held in Seaside, CA from July 17–18. The theme of the meeting was the same as that of the 2024 ASA, CSSA, and SSSA Annual Meeting, “AI Innovations for a Changing Climate.” The meeting was hosted by Arun Jani, Assistant Professor in the Department of Biology and Chemistry at California State University, Monterey Bay.

This meeting is a great opportunity to network with colleagues and students from around the West and exchange scientific information. The meeting was attended by participants from several institutions, including New Mexico State University, University of Nevada (Reno), Utah State University, Montana State University, California State University (Chico and Monterey Bay), University of California (Santa Cruz and Davis), Oregon State University, and USDA (ARS and NRCS). Also attending were students and researchers from Kansas State University (outside of the WSCS region) and industries like Vilmorin|Mikado, Driscoll’s Inc., Wilbur|Ellis, and Wintersteiger. Professional participation increased significantly this year.

This year, participants arrived on Tuesday, July 16. Activities started the next day with a welcome from Dr. Jani and WSCS President Sandya Kesoju. The session began with remarks from CSSA President Kim Garland|Campbell and speakers from industry who talked about the latest technology, developments, and sustainable agriculture.

This was followed by student oral and poster presentation competitions and professional oral and poster presentations.

### **Research and Farm Tour**

The second day of the meeting began with agricultural tours organized by Gina Bella Colfer, a pest control adviser and Certified Crop Adviser (CCA) with WilburEllis.

Meeting participants first stopped on a farm in Chualar, CA to learn about automated weeding technologies used in the region(**Figure 1**). Mr. Sal Espinosa of Stout Technologies demonstrated and discussed automated weeding technologies in specialty crop production like lettuce and explained how the sensor uses computer vision and machine learning to identify weeds. Participants had an opportunity to see the equipment in operation cultivating weeds while leaving lettuce plants alone.

*Figure 1. Meeting participants learn about automated weeding technologies on a farm in Chualar, CA.*

The next stop was Taylor Farms, also in Chualar where attendees had an opportunity to learn about cool-season vegetable production and organic farming. They met the 2024 Organic Farmer of the Year, Larry Santos, who shared his experience working with cool-season vegetables and producing them organically. Santos answered questions raised by the participants and showed them fields of broccoli, lettuce, and other vegetables grown organically. Broccoli was harvested and packed in the field(**Figure 2**).

After the tour, professional presentations and the WSCS business meeting took place at the University Center Auditorium.

## **Student Presentations and Awards**

Every year, the WSCS offers the A.K. Dobrenz Student Awards for the student oral and poster presentations. Awards included certificates and monetary prizes. The first place winner of the oral competition also received a travel stipend to attend the CSSA International Annual Meeting. The 2024 winners of the student oral competition were: first place—McKenna Carnahan (Utah State University); second place—Luis Esquivel Cervantes (Montana State University); and third place—Brielle Liske (California State University, Monterey Bay). Poster presentation winners were first place—Megan Baker (Utah State University); second place—Curtis Bireley (California State University, Monterey Bay), and third place—Alex Rodriguez (California State University, Monterey Bay). There were no eligible applicants this year for the Emerging Scientist Award.

### **Acknowledgments**

We congratulate the award winners and wish them great success in their future careers. We are grateful to Sarah Paese, Member Experience Coordinator for the Societies, for her efforts to help organize the 2024 meeting. Special thanks are extended to Dr. Kim Garland Campbell, President of CSSA, for opening remarks and encouragement for students' success. We would like to extend our thanks to our industry partners for providing financial assistance (Vilmorin Mikado and Driscoll's Inc.) for lunch and the banquet dinner and organizing agricultural tours (Wilbur Ellis). The event wouldn't have been successful without their support. We are also grateful to Dr. Arun Jani for hosting the meeting at California State University, Monterey Bay; the program section moderators; the student oral and poster competition judges; and all speakers for making this year's program successful.
